DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to a photodiode array, classified in class 250, subclass 208.1.
- II. Claims 17-27 and 35-43, drawn to a biasing circuit for an avalanche photodiode and method of biasing the avalanche photodiode, classified in class 250, subclass 214R.
- III. Claims 28-34, drawn to an avalanche photodiode, classified in class 250, subclass 214.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related but are considered separate and distinct inventions. Though the inventions relate in the fact that "photodiodes" are claimed and that a method of and a circuitry to bias a photodiode is claimed, they are different inventions and have separate utility (see MPEP § 806.05). In the instant case, the Group I invention is merely claiming the specifics of a photodiode array, especially with reference to claim 1, there is not requirement include the biasing circuit of the Group II invention in this device. The Group II, especially with respect to claims 17 and 35, claims the specifics of a biasing circuit however the structural limitations of the photodiode are not outlined or specific to the Groups I and III inventions. The Group III invention, especially claim 28, outlines the structural makeup of an avalanche

photodiode, however requirements for a biasing circuit as claimed in the Group II are not present. Therefore, it is shown that each of the inventions is separate and distinct inventions and has utility.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
